

Eduroam Setup – iOS Quick Guide

This Quick Guide shows you how to setup your Apple phone or table to use the [Eduroam](https://www.eduroam.org/) wi-fi network.

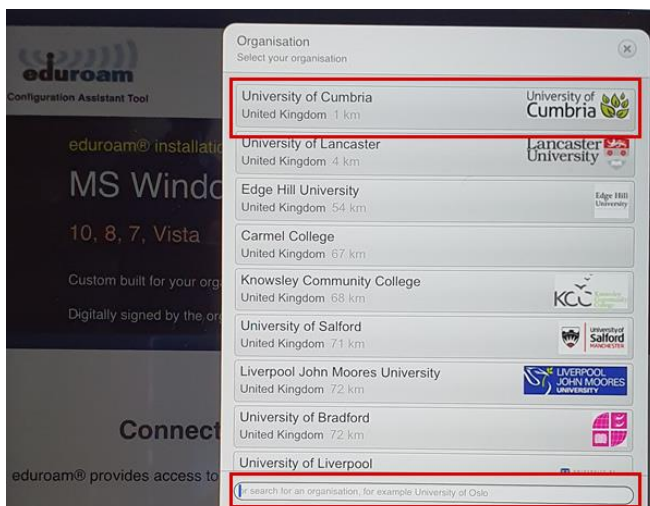

In order to configure Eduroam for an iPhone or iPad, you will need to **visit the Eduroam website to download and install the Eduroam configuration file:**

- <https://cat.eduroam.org/>

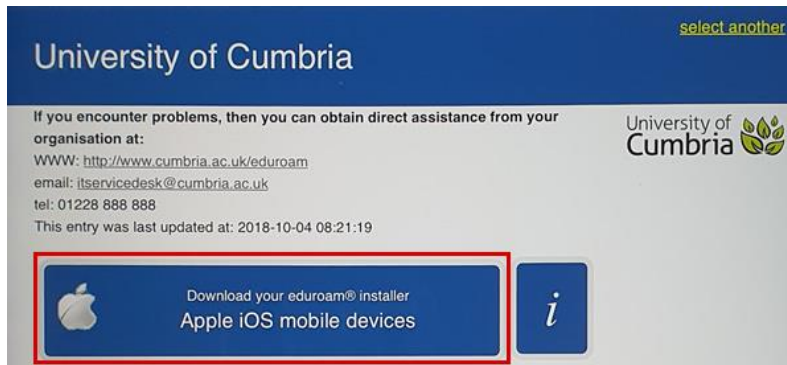

1. When you arrive at Eduroam on your Apple device, you are prompted to download the installer. Click on the button to begin:

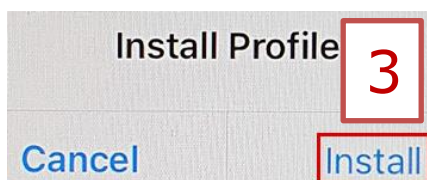

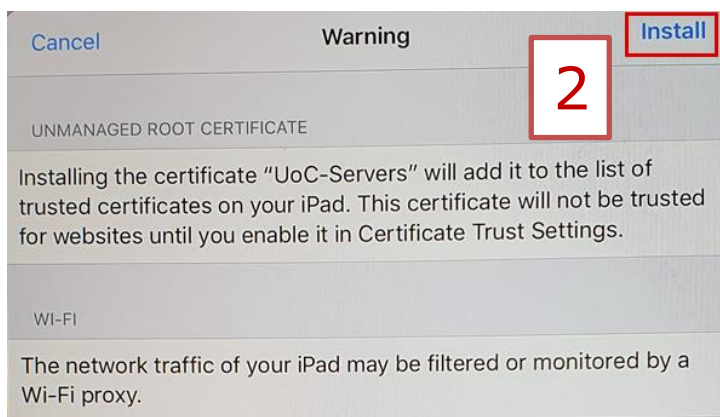

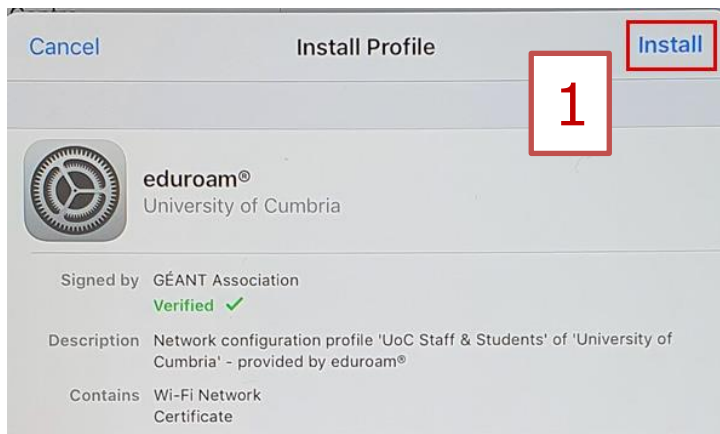

2. On the next screen you need to choose your institution (University of Cumbria). Eduroam will do its best guess of your current location and should suggest the nearest institutions – if Cumbria does not appear on the list, simply use the search box to locate it:

3. You are now presented with the correct configuration file for your device / model. **Click to download:**

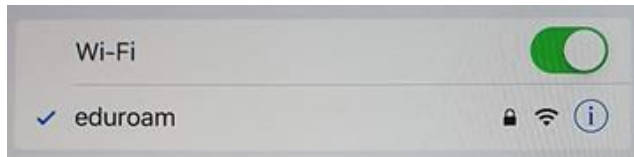

4. Once it has downloaded, you are asked to **Install** the file. This is perfectly safe and you will receive a number of prompts and confirmations before your device will do the actual installation. **During the writing of this guide, I was prompted three separate times to do the installation:**

Eduroam is now ready to use.

Go to the wifi settings on your device and select Eduroam from the list of available networks.

If you have the option – select Connect Automatically – this will connect you to Eduroam whenever you are in range of an Eduroam hotspot.

Remove Eduroam

If you want to remove Eduroam, simply:

- a. Go to the **Settings App** on your device
- b. Select **General**
- c. Click on **Eduroam**
- d. Click on **Remove Profile**
- e. **Confirm**
